**Summary:**

**Highly skilled Back-end Developer with a strong background in programming and problem-solving. Experienced in building web applications and APIs, optimizing database performance, and collaborating with cross-functional teams. Adept at learning new technologies and staying up-to-date with industry trends.**

**Education:**

**Bachelor of Science in Computer Science, XYZ University, City, State (Year)**

**Skills:**

- Programming Languages: Python, Java, C++**
- Web Development: Django, Flask, HTML, CSS, JavaScript**
- Database Management: SQL, MySQL, MongoDB**
- Version Control: Git, GitHub**
- Agile Methodologies**
- Problem-solving skills**

- **Strong communication and collaboration abilities**

#### **Experience:**

##### **Back-end Developer, ABC Company, City, State (Year-Present)**

- **Developed and maintained back-end functionality for web applications using Python and Django.**
- **Collaborated with front-end developers and designers to create seamless user experiences.**
- **Optimized database performance and improved queries for faster data retrieval.**
- **Implemented security measures to protect sensitive user data.**
- **Conducted code reviews and provided feedback to improve code quality.**

##### **Software Engineer Intern, XYZ Company, City, State (Year)**

- **Assisted in the development and testing of web applications using Java and Spring Framework.**
- **Participated in Agile ceremonies and contributed to the team's performance.**
- **Collaborated with the team to identify and fix bugs and issues in the codebase.**
- **Gained experience in working with cross-functional teams and maintaining code integrity.**

#### **Projects:**

- **Personal Finance Tracker Application**
  - **Developed a web application using Django and MySQL to help users track their income, expenses, and savings.**

- Implemented authentication and authorization functionalities to ensure data privacy.
  - Utilized RESTful APIs to access external financial services for real-time data updates.
- 
- Online Food Ordering System
    - Created a back-end system using Flask and MongoDB to handle food orders from customers.
    - Integrated payment gateways for secure online transactions.
    - Implemented order notifications and email confirmations for improved user experience.

#### **Certifications:**

- Django for Beginners Certification, XYZ Online Course (Year)
- Agile Certified Practitioner (PMI-ACP), Project Management Institute (Year)

#### **Languages:**

- English (Fluent)
- Spanish (Intermediate)
